

# CUSTOM HIVES Kalle's Wild Honeybees

## Beekeeping offers a world of possibilities

You've probably heard that honeybees are essential to many of the foods we eat, and that they've been in decline in recent years. Many will speculate on the exact cause of their decline. We could cite environmental toxicity, pesticide use, stress of being moved all around, various diseases, etc. Since they don't have much of an immune system and share a common gut by feeding each other, they tend to act as an early indicator to the overall environmental health of an area. The way I see it is that they are a part of a web of life that is reflecting to us our own toxicity.

As in many wild beings, honeybees are aware of the more subtle forces at work in the land, and will thrive best when the land itself and all its inhabitants are in balance. Through observation, intuition, and iteration I have come up with a hive design and management philosophy that allows maximum engagement, health and learning for all parties. In my work I have been guided to a greater understanding of the energies present in people and in land, and have come to offer personal coaching, land clearings and healing. I am a teacher, minister, and spirit coach.

To inquire about hive prices and availability, installation, feral hive removal, beekeeping classes, personal coaching or land clearings, please contact me directly.

### Why keep bees?

- bees help your garden flourish
- there is much to learn from them
- we can share in nature's generosity

### My hive design:

- elegant and functional
- easy on the beekeeper and the bees
- a great way to get started
- honey & beeswax are easily harvested
- bees build their comb as in the wild
- design supports bee health & hygiene

### View-hive and hive-cam options

- allow non-invasive in-hive observation (thus you check more and learn more)
- provide a learning resource to schools

### Land-work

- I listen to what's needed and perform land healing if necessary before bee introduction.
